The Compliance Reality for UK Manufacturers

The cold, hard facts — and how to fix them before they cost you a fine or a contract

The Bid and Tender Cure for UK Manufacturers

Every Step. Every Specialist. Every Time.

Prepared by **Rob Atkins** · Founder & Principal Consultant, Your Best Solution Limited

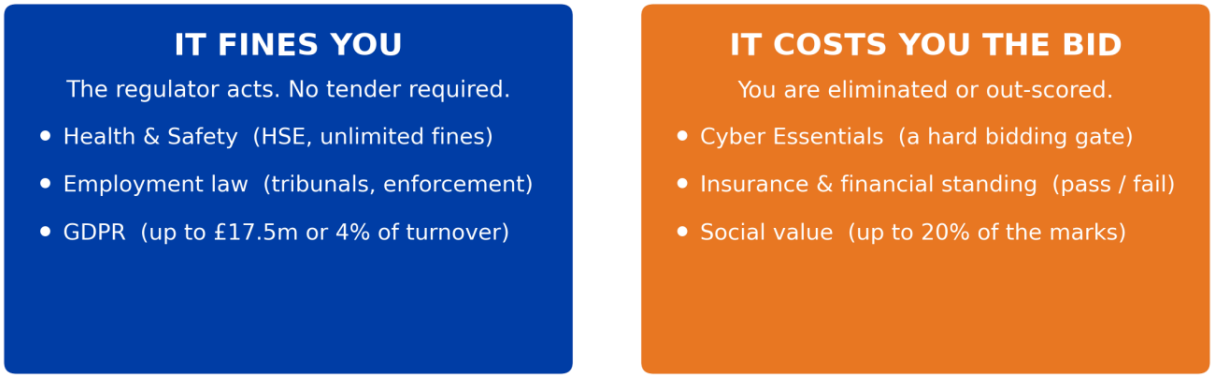

yourbestsolution.co.uk · Essex · Kent · Hertfordshire · London E/N

It can be tempting to put compliance on the back burner, but addressing it now can save you significant time, cost and stress later.

Public sector buyers, and increasingly the large private customers above you in the supply chain, no longer just ask whether you can make the product. They ask whether you are safe, legal, insured, certified and demonstrably responsible before they will let you near a contract. Manufacturers that ignore this do not usually find out gently. They find out when a bid is thrown out at the first gate, or when a regulator arrives after something has already gone wrong.

This report gives the cold, hard facts as they stand today and over the next five years. After each fact you will see exactly which specialist inside the YBSL Cure Alliance closes that gap. Two distinctions run through everything that follows, and they matter:

- Some things fine you. Health and safety, employment law and data protection are enforced by regulators. No tender is needed to trigger them, and the penalties are real.
- Some things cost you the contract. Cyber Essentials, insurance, financial standing and social value do not carry a government fine, but without them you are eliminated or out-scored before a human reads your bid.

The honest second distinction: a few of these duties only become law once you pass a size threshold. Below it, the law does not compel you — but your biggest customers demand the same evidence in their tender questions anyway. The head-in-the-sand risk is real either way; only the reason differs.

The whole picture at a glance

Where each requirement bites, who it applies to, and the YBSL specialist that handles it.

Requirement	Bites you as	Who it hits	YBSL service
Health & Safety	Fine	Every manufacturer	Health & Safety · ISO Consultant
Employment law (ERA 2025)	Fine	Every employer	HR & Employment Law
Data protection (UK GDPR)	Fine	Every manufacturer	Cyber / vCISO · Solicitor
Cyber Essentials	Lost bid	Anyone tendering	Cyber / vCISO · MSP
Insurance cover & format	Lost bid	Anyone tendering	Insurance Broking
Financial standing	Lost bid	Anyone tendering	Chartered Accountant
ISO 9001/14001/45001/27001	Lost bid	Larger contracts	ISO Consultant
Social value (up to 20%)	Lost bid	Public tenders	Bid Writing · HR · Training · ESG
Carbon Reduction Plan	Both	Threshold + contracts	Sustainability / ESG
Modern Slavery statement	Both	£36m+ / by contract	HR · Web & Digital
Contract terms & liability	Lost bid	Anyone signing	Commercial Solicitor
Website evidence	Lost bid	Anyone tendering	Web Design & Digital

Note: "Fine" = a regulator can penalise you. "Lost bid" = you fail a gate or lose marks. "Both" = statutory above a size threshold, and demanded contractually below it.

PART 1 What fines you today

Employment law changed on 6 April 2026 — and it is being enforced now.

The Employment Rights Act 2025 is law. Statutory sick pay and paternity and parental leave are now day-one rights, the protective award for getting a collective redundancy wrong has doubled to 180 days' pay per employee, and a new Fair Work Agency began enforcing on 7 April 2026. From 1 January 2027 the unfair dismissal qualifying period drops from two years to six months. A manufacturer with old contracts and informal “manage them out” habits is carrying live tribunal exposure today.

HOW YBSL FIXES IT **HR & Employment Law.**

Reviews and updates your contracts, probation and dismissal processes, pay and EDI policies, and your Modern Slavery position — so the exposure is closed before it becomes a claim, and the same evidence feeds your social value score.

Health & Safety carries the heaviest fines in the building.

HSE fines scale with turnover and run into millions for serious breaches; the Corporate Manslaughter Act carries unlimited fines and directors can face personal prosecution. For a business with machinery this is the single largest penalty risk you hold, and it is assessed at the Selection Questionnaire stage on virtually every public contract.

HOW YBSL FIXES IT **Health & Safety, with the ISO Consultant.**

Audits your H&S documentation, produces your written policy and RAMS, runs COSHH, manual-handling and fire assessments, and prepares CHAS / SafeContractor accreditation — aligned with ISO 45001 so one set of evidence satisfies both the regulator and the buyer.

A data breach can cost up to £17.5m or 4% of turnover.

UK GDPR is fully in force. The ICO can fine up to £17.5m or 4% of global annual turnover, and a reportable breach must reach the ICO within 72 hours. If you process a customer's data, your Data Processing Agreement pins the liability on you — so a weak cyber posture is not just an IT problem, it is a contractual and financial one.

HOW YBSL FIXES IT **Cyber Security / vCISO, with the Commercial Solicitor and Web & Digital.**

The vCISO handles your GDPR position, incident response plan and the DPA with the buyer; the Solicitor makes your Master Services Agreement defensible; and Web & Digital ensures your privacy policy, cookie consent and data-handling notices stand up to due diligence.

PART 2 What costs you the contract

Cyber Essentials is now a hard gate — and from April 2026 it got stricter.

Cyber Essentials is increasingly the floor you must clear even to bid. There is no government fine for lacking it — but you are eliminated from the tender, and if a required certificate lapses you can breach the contract. From 27 April 2026, missing the 14-day window for a critical or high-risk patch is an automatic failure, multi-factor authentication is mandatory across all cloud services, and cloud can no longer be excluded from scope.

HOW YBSL FIXES IT **Cyber Security / vCISO, with the MSP and Hardware partners.**

The vCISO assesses you against the five controls and runs the certification; the MSP keeps patching inside the 14-day rule with automated management and endpoint protection; Hardware & Infrastructure secures firewall, switch and device configuration to the standard.

Insurance is one of the most common reasons manufacturers fail at the questionnaire stage.

Public and Employers' Liability, Professional Indemnity and Product Liability must be held at the cover levels the buyer specifies, and the certificates must show the right detail in the right format. Under-insured, wrong format, or missing a policy, and it is a straightforward fail — before anyone assesses your capability.

HOW YBSL FIXES IT **Insurance Broking.**

Audits your schedule against the buyer's minimum requirements per section, sources the correct PL, EL, PI, Product and Cyber Liability cover, and issues compliant certificates in the format the tender portal requires — nothing over-insured, nothing missing.

Financial standing is a gateway criterion on every contract.

Buyers check turnover against contract value, filed accounts, and financial ratios such as current ratio, gearing and interest cover. Newer businesses without three years of filed history fail unless the right management accounts and accountant's letters are prepared. Key-person dependency is now assessed as part of business-continuity due diligence too.

HOW YBSL FIXES IT **Chartered Accountant, with Key Person Insurance.**

Prepares accounts in the format evaluators expect, produces management accounts and accountant's letters where filed history is thin, and monitors the ratios buyers test; Key Person cover evidences resilience where one or two people hold the contract together.

ISO certifications are the language of public procurement.

ISO 9001 is now table stakes. ISO 14001 (environmental) and ISO 45001 (health & safety) are increasingly required rather than requested, and ISO 27001 appears on larger or data-heavy contracts. Many manufacturers hold 9001 alone and are quietly screened out of everything that asks for the others.

HOW YBSL FIXES IT **ISO Consultant.**

Runs a gap analysis against your target standards, builds and implements each management system, and project-manages the UKAS-accredited audit — then keeps you certified through annual surveillance, mapped to the specific tender sections each standard unlocks.

Social value is up to a fifth of the marks — and most manufacturers score near zero.

Under the Procurement Act 2023, award moved from cheapest-compliant to "most advantageous tender," letting buyers weight social and environmental outcomes. A 10% weighting is the recommended minimum, flexible up to 30%; Essex County Council applies 20%. The trap: manufacturers already do local hiring, apprenticeships and community work — but cannot evidence or quantify it, so they leave those marks on the table.

HOW YBSL FIXES IT **Bid Writing, with HR, Training & Skills and Sustainability.**

Bid Writing turns what you already do into scored, KPI-trackable commitments using the Social Value TOM System; HR evidences EDI and wellbeing, Training evidences apprenticeships and STEM outreach, and Sustainability supplies the environmental commitments — so the 20% is captured, not gifted to a competitor.

Carbon: a Reduction Plan is scored in tenders, and reporting is coming down the size scale.

Statutory carbon reporting (SECR) is mandatory only for large companies — broadly two of: £36m turnover, £18m balance sheet, 250 employees. Below that there is no legal duty yet. But a published Carbon Reduction Plan is now scored as social value, buyers demand Scope 1, 2 and 3 data in questionnaires regardless of your size, and the reporting net is widening toward mid-sized firms over the next few years.

HOW YBSL FIXES IT **Sustainability / ESG, with the ISO Consultant and Web & Digital.**

Produces a compliant Carbon Reduction Plan and Scope 1/2/3 measurement, guides ISO 14001, and covers EPR, WEEE and RoHS where relevant; Web & Digital publishes the plan where buyers look for it.

Modern Slavery: legally required above £36m turnover — demanded contractually well below it.

A Modern Slavery statement is a legal obligation only once turnover reaches £36m. Most manufacturers in the 10–500 employee band sit under that. But larger customers require one in their tender questions anyway, and evaluators check your website for it — so for most firms it is a commercial requirement, not a statutory one, and its absence still loses the work.

HOW YBSL FIXES IT **HR & Employment Law, with Web & Digital.**

HR produces the statement and the supply-chain audit behind it; Web & Digital publishes it correctly on your site alongside your other required policies.

Buyer contract terms are not written in your favour.

Standard contract terms often set liability caps and clauses that conflict with your insurance conditions or operating model. Sign as-is and you can be exposed on force majeure, limitation of liability, termination or TUPE. Missing an Anti-Bribery or Whistleblowing policy is also now a common questionnaire fail — and the failure-to-prevent-fraud offence raises the bar again for larger firms.

HOW YBSL FIXES IT **Commercial Solicitor.**

Reviews and redlines the terms before you sign, aligns your liability cap with your PI cover, and drafts the Anti-Bribery, Whistleblowing and conflict-of-interest policies buyers expect.

The first thing a buyer does is look at your website. If it is not current, you are out.

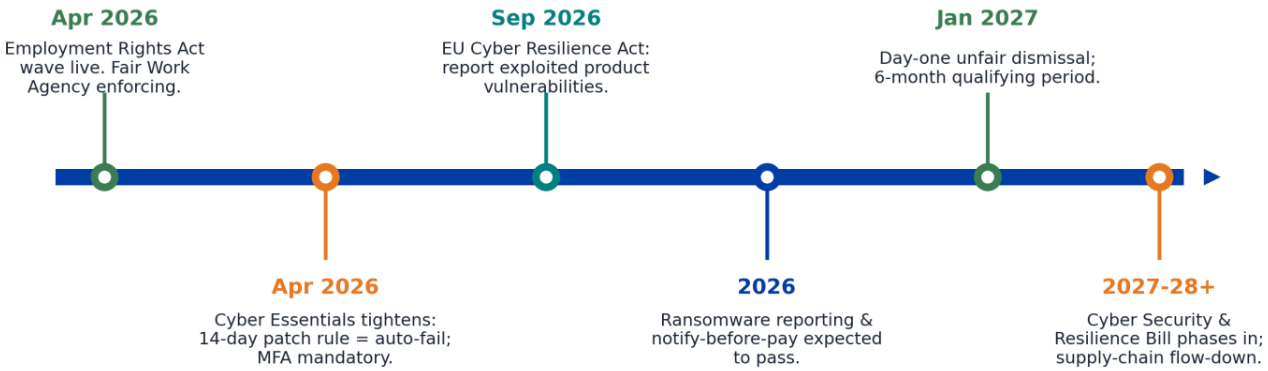

During due diligence, evaluators go straight to your site to verify your certifications, Carbon Reduction Plan, Modern Slavery statement and privacy policy. If your ISO logos are stale, your CRP is missing or your policies are not published, the tender is over before your bid is read — however good the product.

HOW YBSL FIXES IT **Web Design & Digital.**

Audits your site for the exact content buyers check, publishes your CRP, Modern Slavery statement and privacy policy correctly, builds capability and accreditation pages for due-diligence searches, and keeps everything current as certifications renew.

PART 3 What is coming — the next five years

None of this is settled history — it is the direction of travel a manufacturing MD needs on the radar now, because the lead time to comply is measured in months, not weeks.

The Cyber Security & Resilience Bill will reach you through your supply chain.

The Bill is not law yet — expected to pass during 2026, with phased implementation possibly running to 2028. Manufacturing is not currently named in direct scope, but it regulates managed service providers for the first time and creates "designated critical suppliers," making supply-chain cyber resilience a statutory obligation. In practice your large customers will push those requirements down to you contractually, well before the law names you.

HOW YBSL FIXES IT **Cyber / vCISO, with the MSP and OT & ICS partners.**

Positions your cyber posture, incident response and supplier due-diligence documentation now, so that when the first flow-down request arrives you answer it in days rather than scrambling.

Ransomware rules are coming — and the real message is: be able to recover without paying.

The proposed payment ban targets the public sector and critical national infrastructure, not a typical manufacturer. What will reach everyone else is a duty to notify authorities before paying and a mandatory incident-reporting regime, with an initial report expected within 72 hours — likely legislating in 2026. With payment restricted or scrutinised, tested offline backups and a rehearsed continuity plan become the difference between a bad week and a closed business.

HOW YBSL FIXES IT **MSP & Managed IT, with the vCIO.**

Builds and tests your Business Continuity and Disaster Recovery plan and offline backups; the vCIO owns the board-level continuity strategy so recovery is a rehearsed process, not a panic.

If you make anything connected, EU Cyber Resilience Act reporting duties now apply.

Since 11 September 2026, manufacturers of products with digital elements have had to report actively exploited vulnerabilities and severe incidents. If you sell anything with software or connectivity into Europe, which is increasingly common on the factory floor and in modern products, this is a firm obligation and the clock is already running, on top of the OT and ICS security buyers already ask about.

HOW YBSL FIXES IT **OT & ICS Security, with the vCISO.**

Assesses your operational technology against IEC 62443, segments OT from IT, and documents the controls and vulnerability-handling process the Act and your buyers expect.

The strategic layer: this only works joined up.

Sixteen separate suppliers, each doing their own thing, produce sixteen disconnected documents that contradict each other under scrutiny. The failures above rarely happen in isolation — a lapsed certificate, an out-of-date website and a missing policy compound. The vCIO and the wider Alliance exist to make the technology and compliance decisions tell one coherent story to the buyer.

HOW YBSL FIXES IT **vCIO Technology Advisory — the bridge across the Alliance.**

Provides board-level oversight, a roadmap aligned to your bid pipeline, and coordination across every specialist so each investment strengthens your bid position rather than sitting in a silo.

The bottom line

Two truths cut through all of it. First, separate a fine from a lost bid — health & safety, employment law and data protection fine you today; Cyber Essentials, insurance, financial standing and social value cost you the contract. Both hurt; only one involves a regulator. Second, separate what the law forces on you from what your customers force on you — most manufacturers sit below the statutory thresholds for carbon and modern slavery reporting, but their biggest customers demand the same evidence in every tender. The ostrich loses the work either way.

The point of the Cure Alliance is not sixteen invoices. It is one coordinated plan that closes the gaps in the order that matters — starting with whichever one is costing you the next contract, or the next inspection.

16 Specialists. One Coordinated Plan.

Book a YBSL Health Check and we will show you exactly where you would be eliminated or fined — and fix the highest-priority gap first.
